

PRODUCT MANAGER

Tsvetan Milanov

Building products that make complex technology feel simple.

📍 Sofia, Bulgaria ✉ tsetso.milanov@gmail.com in LinkedIn ☎ +359 888 201 491

I'm a Product Manager who likes making complex technology simple. I start by understanding the problem, then work with design and engineering to build the simplest solution that solves it.

Over the past five years at Chaos, I've worked on platform products, AI features, semantic search, and analytics, helping build products that architects, designers, and 3D artists use every day. Lately AI has become a core part of how I work, allowing me to prototype ideas, automate workflows, and test solutions with working software instead of docs and slides.

I believe good products don't ask users to understand the system - the system should just feel natural.

EXPERIENCE

Product Manager

Jul 2023 - Present

Chaos · Sofia, Bulgaria

- Unified asset discovery across our visualization products by leading the integration of Chaos Cosmos into Enscape and Envision, helping **make Cosmos the most widely used product in the portfolio.**

- Made PBR material creation more accessible by defining and launching AI Materials, so **users can generate materials straight from a reference image**.
- Improved asset discoverability by leading the development of semantic and image-based search, so users can **search by describing what they need** or using a reference image instead of exact keywords.
- Made product data easier to act on by turning it into **simple dashboards** that product, marketing, and business teams could understand at a glance.
- Set the direction for Chaos Cosmos, by defining strategy across AI, search, and platform capabilities, **balancing immediate customer needs with long-term product goals**.

Associate Product Manager

Sep 2021 - Jul 2023

Chaos · Sofia, Bulgaria

- Removed manual bottlenecks in the 3D content pipeline by building internal automation tools, **doubling asset conversion** while cutting errors.
- Gave engineering clear priorities by turning business goals, customer insights, and partner feedback into concrete plans.
- Reduced the risk of building the wrong thing by combining customer interviews, usability testing, and product analytics to validate ideas before development.
- Helped Chaos Cosmos grow into a shared platform by coordinating feature adoption across multiple visualization products.

Team Leader, Chaos Cosmos 3D

Aug 2020 - Sep 2021

Chaos · Sofia, Bulgaria

- Built the production capacity Chaos Cosmos needed to scale by forming and leading a specialized 3D content team.
- Kept quality consistent as the team scaled by setting production standards, documentation, and quality guidelines.
- Established the content foundation for the Chaos Cosmos launch by growing the curated asset library **from 650 to over 3,000 assets** within a year.

Team Leader, 3D Production

May 2017 - Aug 2020

Chaos · Sofia, Bulgaria

- Scaled 3D content production by leading a 10-person team delivering assets for global marketing campaigns.
- Reduced friction in production by improving internal workflows and introducing a more collaborative approach with clients.

Senior 3D Artist

Mar 2013 - May 2017

Chaos · Sofia, Bulgaria

- Helped customers better understand our products by creating photorealistic 3D content for marketing and training.
- Made complex workflows easier to learn by developing tutorials that improved onboarding and customer enablement.

BUILDING

AI-assisted Partner Distribution Tool

Spotted a manual, repetitive step in one of our 3D asset distribution workflows and built an internal tool to fix it using Claude Code. I handled it end-to-end: mapped the workflow, defined requirements, integrated the APIs, and built a simple interface so anyone at the company could prepare and send assets without needing an engineer.

Photography Portfolio

Building my own photography portfolio with HTML, CSS, and JavaScript. It's been a good excuse to work through a full product process myself: design, architecture, infrastructure, deployment - using Claude Code as a coding partner along the way.

AI Workflow Experiments

I build small AI tools to solve problems I run into at work, mostly to see how AI changes product development when you can replace documents with working prototypes.

PRODUCT PHILOSOPHY

I believe the best products hide complexity instead of showing it off. I start by understanding the real problem, build the simplest version that solves it, and

test it as early as I can. AI hasn't changed how I think about products, but has surely changed how fast I can turn thinking into something real, so I can learn and adjust as I go.

SKILLS

Product

Platform Strategy
Discovery
Roadmapping
Analytics
Cross-functional Leadership

AI

Claude Code
LLM Features
AI Product Development
Workflow Automation
Semantic Search

Technical

SQL
Data Studio
Jira

EDUCATION

Bachelor of Computer Graphics

New Bulgarian University · Sofia, Bulgaria
Oct 2008 - Jun 2012

CERTIFICATIONS

First Certificate in English (FCE)

University of Cambridge · Sofia, Bulgaria
2005
